Product Name...... Wireless transmitter

Model/Type reference ...... WVD024-RP

Trade Mark ..... wintrans

FCC ID ...... 2AK7F-WVD024-RP

Applicant's name ...... Wuxi Wintrans Information Technology Co., Ltd

Room B1-318, No. 999 Gao Lang East Road, Wuxi City, Jiangsu Address of applicant .....

Province, China

Test Firm ..... Shenzhen CTL Testing Technology Co., Ltd.

Floor 1-A, Baisha Technology Park, No.3011, Shahexi Road, Address of Test Firm .....

Nanshan District, Shenzhen, China 518055

Test specification.....

Standard...... FCC Part 15.247: Operation within the bands 902-928 MHz,

2400-2483.5 MHz and 5725-5850 MHz.

TRF Originator ...... Shenzhen CTL Testing Technology Co., Ltd.

Master TRF ...... Dated 2011-01

Date of Receipt...... Feb. 08, 2017

**Date of Test Date**...... Feb. 08, 2017 – Feb. 17, 2017

**Data of Issue**...... Feb. 17, 2017

Result ..... Pass

## 1. SUMMARY

#### 1.1. TEST STANDARDS

The tests were performed according to following standards:

FCC Rules Part 15.247: Frequency Hopping, Direct Spread Spectrum and Hybrid Systems that are in operation within the bands of 902-928 MHz, 2400-2483.5 MHz, and 5725-5850 MHz

ANSI C63.10: 2013: American National Standard for Testing Unlicensed Wireless Devices

ANSI C63.4: 2014: –American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40GHz Range of 9 kHz to 40GHz

KDB558074 D01 V03r05: Guidance for Performing Compliance Measurements on Digital Transmission Systems (DTS) Operating Under §15.247

# 1.2. Test Description

| FCC PART 15.247                                       |                                |      |  |  |  |
|---|--------------------------------|------|--|--|--|
| FCC Part 15.207                                       | AC Power Conducted Emission    | N/A  |  |  |  |
| FCC Part 15.247(a)(2)                                 | 6dB Bandwidth                  | PASS |  |  |  |
| FCC Part 15.247(d)                                    | Spurious RF Conducted Emission | PASS |  |  |  |
| FCC Part 15.247(b)                                    | Maximum Conducted Output Power | PASS |  |  |  |
| FCC Part 15.247(e)                                    | Power Spectral Density         | PASS |  |  |  |
| FCC Part 15.109/ 15.205/ 15.209                       | Radiated Emissions             | PASS |  |  |  |
| FCC Part 15.247(d)                                    | Band Edge                      | PASS |  |  |  |
| FCC Part 15.203/15.247 (b)                            | Antenna Requirement            | PASS |  |  |  |
| FCC Part 15.203/15.247 (b)  Antenna Requirement  PASS |                                |      |  |  |  |

V1.0 Page 6 of 31 Report No.: CTL1702084102-WF

# 1.3. Test Facility

#### 1.3.1 Address of the test laboratory

Shenzhen CTL Testing Technology Co., Ltd.

Floor 1-A, Baisha Technology Park, No. 3011, Shahexi Road, Nanshan, Shenzhen 518055 China

There is one 3m semi-anechoic chamber and two line conducted labs for final test. The Test Sites meet the requirements in documents ANSI C63.4 and CISPR 22/EN 55022 requirements.

#### 1.3.2 Laboratory accreditation

The test facility is recognized, certified, or accredited by the following organizations:

#### IC Registration No.: 9618B

The 3m alternate test site of Shenzhen CTL Testing Technology Co., Ltd. EMC Laboratory has been registered by Certification and Engineer Bureau of Industry Canada for the performance of with Registration No.: 9618B on November 13, 2013.

#### FCC-Registration No.: 970318

Shenzhen CTL Testing Technology Co., Ltd. EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. Registration 970318, December 19, 2013.

# 1.4. Statement of the measurement uncertainty

The data and results referenced in this document are true and accurate. The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities. The measurement uncertainty was calculated for all measurements listed in this test report acc. to CISPR 16 - 4 "Specification for radio disturbance and immunity measuring apparatus and methods — Part 4: Uncertainty in EMC Measurements" and is documented in the Shenzhen CTL Testing Technology Co., Ltd. quality system acc. to DIN EN ISO/IEC 17025. Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

Hereafter the best measurement capability for CTL laboratory is reported:

| Test                                    | Measurement<br>Uncertainty | Notes |
|---|----------------------------|-------|
| Transmitter power conducted             | ±0.57 dB                   | (1)   |
| Transmitter power Radiated              | ±2.20 dB                   | (1)   |
| Conducted spurious emission 9KHz-40 GHz | ±2.20 dB                   | (1)   |
| Occupied Bandwidth                      | ±0.01ppm                   | (1)   |
| Radiated Emission 30~1000MHz            | ±4.10dB                    | (1)   |
| Radiated Emission Above 1GHz            | ±4.32dB                    | (1)   |
| Conducted Disturbance0.15~30MHz         | ±3.20dB                    | (1)   |

<sup>(1)</sup> This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

V1.0 Page 7 of 31 Report No.: CTL1702084102-WF

## 2. GENERAL INFORMATION

#### 2.1. Environmental conditions

During the measurement the environmental conditions were within the listed ranges:

|                     | <u> </u> |
|---------------------|----------|
| Normal Temperature: | 25°C     |
| Relative Humidity:  | 55 %     |
| Air Pressure:       | 101 kPa  |

# 2.2. General Description of EUT

| Product Name:         | Wireless transmitter |
|-----------------------|----------------------|
| Model/Type reference: | WVD024-RP            |
| Power supply:         | DC 3.6V from battery |
| 2.4 GHz               |                      |
| Supported type:       | 802.15.4             |
| Modulation:           | DSSS O-QPSK          |
| Operation frequency:  | 2405MHz to 2480MHz   |
| Channel number:       | 16                   |
| Channel separation:   | 5 MHz                |
| Antenna type:         | Internal Antenna     |
| Antenna gain:         | 4dBi                 |

Note: For more details, please refer to the user's manual of the EUT.

# 2.3. Description of Test Modes and Test Frequency

The Applicant provides communication tools software to control the EUT for staying in continuous transmitting (Duty Cycle more than 98%) and receiving mode for testing.

There are 16 channels provided to the EUT and Channel 01/08/16 were selected for test.

# Operation Frequency List :

| Channel | Frequency (MHz) |
|---------|-----------------|
| 01      | 2405            |
| 02      | 2410            |
| 03      | 2415            |
| i i     | :               |
| 08      | 2440            |
| i i     | ÷               |
| 14      | 2470            |
| 15      | 2475            |
| 16      | 2480            |

Note: The line display in grey were the channel selected for testing

# 2.4. Duty Cycle

| Operated Mode for Worst Duty Cycle          |  |  |  |
|---|--|--|--|
| Operated normally mode for worst duty cycle |  |  |  |
| Operated test mode for worst duty cycle     |  |  |  |
| Mode Duty Cycle (%) Duty Factor (dB)        |  |  |  |
| 802.15.4 100 0                              |  |  |  |

NOTE: NEW BATTERY IS USED DURING ALL TEST

# 2.5. Equipments Used during the Test

| Test Equipment              | Manufacturer            | Model No.                 | Serial No.       | Calibration<br>Date | Calibration<br>Due Date |

## 3. TEST CONDITIONS AND RESULTS

#### 3.1. Conducted Emissions Test

#### **LIMIT**

FCC CFR Title 47 Part 15 Subpart C Section 15.207

| Fraguenay range (MHz) | Limit (dBuV) |           |  |
|-----------------------|--------------|-----------|--|
| Frequency range (MHz) | Quasi-peak   | Average   |  |
| 0.15-0.5              | 66 to 56*    | 56 to 46* |  |
| 0.5-5                 | 56           | 46        |  |
| 5-30                  | 60           | 50        |  |

<sup>\*</sup> Decreases with the logarithm of the frequency.

#### **TEST CONFIGURATION**

#### **TEST PROCEDURE**

- 1. The equipment was set up as per the test configuration to simulate typical actual usage per the user's manual. The EUT is a tabletop system; a wooden table with a height of 0.8 meters is used and is placed on the ground plane as per ANSI C63.10:2013.
- 2. Support equipment, if needed, was placed as per ANSI C63.10:2013.
- 3. All I/O cables were positioned to simulate typical actual usage as per ANSI C63.10:2013.
- 4. The adapter received AC120V/60Hz power through a Line Impedance Stabilization Network (LISN) which supplied power source and was grounded to the ground plane.
- 5. All support equipments received AC power from a second LISN, if any.
- 6. The EUT test program was started. Emissions were measured on each current carrying line of the EUT using a spectrum Analyzer / Receiver connected to the LISN powering the EUT. The LISN has two monitoring points: Line 1 (Hot Side) and Line 2 (Neutral Side). Two scans were taken: one with Line 1 connected to Analyzer / Receiver and Line 2 connected to a 50 ohm load; the second scan had Line 1 connected to a 50 ohm load and Line 2 connected to the Analyzer / Receiver.
- 7. Analyzer / Receiver scanned from 150 KHz to 30MHz for emissions in each of the test modes.
- 8. During the above scans, the emissions were maximized by cable manipulation.

#### **TEST RESULTS**

Not applicable to this device, which is powered by battery.

# 3.2. Radiated Emissions and Band Edge

#### Limit

For intentional device, according to § 15.209(a), the general requirement of field strength of radiated emission out of authorized band shall not exceed the following table at a 3 meters measurement distance.

In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a)

Radiated emission limits

| Frequency (MHz) | Distance (Meters) | Radiated (dBµV/m)                | Radiated (µV/m) |
|-----------------|-------------------|----------------------------------|-----------------|
| 0.009-0.49      | 3                 | 20log(2400/F(KHz))+40log(300/3)  | 2400/F(KHz)     |
| 0.49-1.705      | 3                 | 20log(24000/F(KHz))+ 40log(30/3) | 24000/F(KHz)    |
| 1.705-30        | 3                 | 20log(30)+ 40log(30/3)           | 30              |
| 30-88           | 3                 | 40.0                             | 100             |
| 88-216          | 3                 | 43.5                             | 150             |
| 216-960         | 3                 | 46.0                             | 200             |
| Above 960       | 3 +/-             | 54.0                             | 500             |

## **TEST CONFIGURATION**

(A) Radiated Emission Test Set-Up, Frequency Below 30MHz

(B) Radiated Emission Test Set-Up, Frequency below 1000MHz

(C) Radiated Emission Test Set-Up, Frequency above 1000MHz

#### **Test Procedure**

- 1. Below 1GHz measurement the EUT is placed on a turntable which is 0.8m above ground plane, and above 1GHz measurement EUT was placed on a low permittivity and low loss tangent turn table which is 1.5m above ground plane.
- 2. Maximum procedure was performed by raising the receiving antenna from 1m to 4m and rotating the turn table from 0°C to 360°C to acquire the highest emissions from EUT
- 3. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical.
- 4. Repeat above procedures until all frequency measurements have been completed.

#### **TEST RESULTS**

#### Remark:

- 1. For below 1GHz testing recorded worst at BLE low channel.
- 2. Radiated emission test from 9 KHz to 10th harmonic of fundamental was verified, and no emission found except system noise floor in 9 KHz to 30MHz and not recorded in this report.

# 3.3. Maximum Peak Conducted Output Power

#### <u>Limit</u>

The Maximum Peak Output Power Measurement is 30dBm.

#### **Test Procedure**

Remove the antenna from the EUT and then connect a low loss RF cable from the antenna port to the power sensor.

#### **Test Configuration**

#### **Test Results**

| Channel | Peak Output power (dBm) | Limit (dBm) | Result |
|---------|-------------------------|-------------|--------|

# 3.4. Power Spectral Density

#### **Limit**

For digitally modulated systems, the power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission.

#### **Test Procedure**

- 1. Use this procedure when the maximum peak conducted output power in the fundamental emission is used to demonstrate compliance.
- 2. Set the RBW ≥ 3 kHz.
- 3. Set the VBW  $\geq$  3× RBW.
- 4. Set the span to 1.5 times the DTS channel bandwidth.
- 5. Detector = peak.
- 6. Sweep time = auto couple.
- 7. Trace mode = max hold.
- 8. Allow trace to fully stabilize.
- 9. Use the peak marker function to determine the maximum power level.
- 10. If measured value exceeds limit, reduce RBW (no less than 3 kHz) and repeat.
- 11. The resulting peak PSD level must be 8dBm.

#### **Test Configuration**

#### **Test Results**

| Channel | Power Spectral Density (dBm/3KHz) | Limit (dBm/3KHz) | Result |  |
|---------|-----------------------------------|------------------|--------|--|
| 01      | -17.511                           |                  | 0      |  |
| 08      | -13.129                           | 8.00             | Pass   |  |

#### 3.5. 6dB Bandwidth

#### **Limit**

For digital modulation systems, the minimum 6 dB bandwidth shall be at least 500 kHz

#### **Test Procedure**

The transmitter output was connected to the spectrum analyzer through an attenuator. The bandwidth of the fundamental frequency was measured by spectrum analyzer with 100 KHz RBW and 300 KHz VBW. The 6dB bandwidth is defined as the total spectrum the power of which is higher than peak power minus 6dB.

#### **Test Configuration**

#### **Test Results**

| Channel | 6dB Bandwidth (MHz) | 99% OBW<br>(MHz) | Limit (KHz) | Result |
|---------|---------------------|------------------|-------------|--------|
| 01      | 0.9006              | 1.2029           |             |        |
| 08      | 0.9159              | 1.2082           | ≥500        | Pass   |
| 16      | 0.9160              | 1.2071           |             | 2      |

#### 3.6. Out-of-band Emissions

#### **Limit**

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF con-ducted or a radiated measurement, pro-vided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter com-plies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in §15.209(a) is not required.

## **Test Procedure**

Connect the transmitter output to spectrum analyzer using a low loss RF cable, and set the spectrum analyzer to RBW=100 kHz, VBW= 300 kHz, peak detector, and max hold. Measurements utilizing these setting are made of the in-band reference level, bandedge and out-of-band emissions.

#### **Test Configuration**

#### **Test Results**

Remark: The measurement frequency range is from 30MHz to the 10th harmonic of the fundamental frequency. The lowest, middle and highest channels are tested to verify the spurious emissions and bandage measurement data.

# 3.7. Antenna Requirement

#### **Standard Applicable**

#### For intentional device, according to FCC 47 CFR Section 15.203:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited

#### FCC CFR Title 47 Part 15 Subpart C Section 15.247(c) (1) (I):

(i) Systems operating in the 2400-2483.5 MHz band that is used exclusively for fixed. Point-to-point operations may employ transmitting antennas with directional gain greater than 6dBi provided the maximum conducted output power of the intentional radiator is reduced by 1 dB for every 3 dB that the directional gain of the antenna exceeds 6dBi.

#### **Test Result:**

The maximum gain of antenna was 4dBi.
